ABSTRACT

An information display apparatus 100 having voice calling 101, data on a sender database 104 is retrieved by data retriever 103 based on the sender number acquired via calling number acquisition 102. Application selector 109 uses terminal resource acquisition 108 or network resource acquisition 106 to acquired the resource described in the sender data based on the retrieved sender data and selects the application corresponding to the resource. Display 111 displays the acquired resource via the application. This displays data related to the sender at call incoming, thus allowing the user to quickly recognize the information on the sender thus enhancing the convenience related to a call.
